Design Report

73 High school BEH web site

Class Hypermedia Web Application

Author: Guillaume Biez, Sami El Alami and Aurélien Hébert

Evaluator: Stefano Bruna and Franca Garzotto

I. Introduction.

II. Specifications of the project.

III. Interactive Dialogue Model.

a) C-IDM

b) L-IDM

c) P-IDM

IV. Sketches and scenarios.

a) Sketches.

b) Scenarios.

1. A user wants to know the courses of his formation (Passage par home -> Years -> formation -> Courses by formation)
2. A user wants to know who is teaching mathematics (Passage par : Home -> All Courses -> Math -> Teacher.)
3. A teacher wants to add information on his course
4. A user wants to know the teaching material for the mathematics course
5. A user wants to know more about the school (about us: one precise information, per example : Success data for the science diploma)

V. Conclusion.

Extra : All the sketches

I. Introduction.

This report is about the definition of specifications of the hypermedia project. This project given by the professors Stefano Bruna and Franca Garzotto consist on the realisation of an high school website.

In this report we will explain to you which are the different links and relations between all the page of the website. It will reflect the reflection we had about his global architecture. The main goal of this report is to give an outline of the visual of our website, structured with simple element and simple text. In this report the design showed will not reflect the final product. It's just to fix the minimal need of the pages and of the website.

On the first time we will present the IDM scheme like the C-IDM, the L-IDM or the P-idm that we have established in order to built the website.

Then we will give more details about the pages themselves with the sketches and some user scenarios.

II. Specifications of the project.

Our high school website has to provide all useful informations for different kind of users as students, parents, teachers and institution, prospects users ... etc. Moreover, they will have to access the information they want

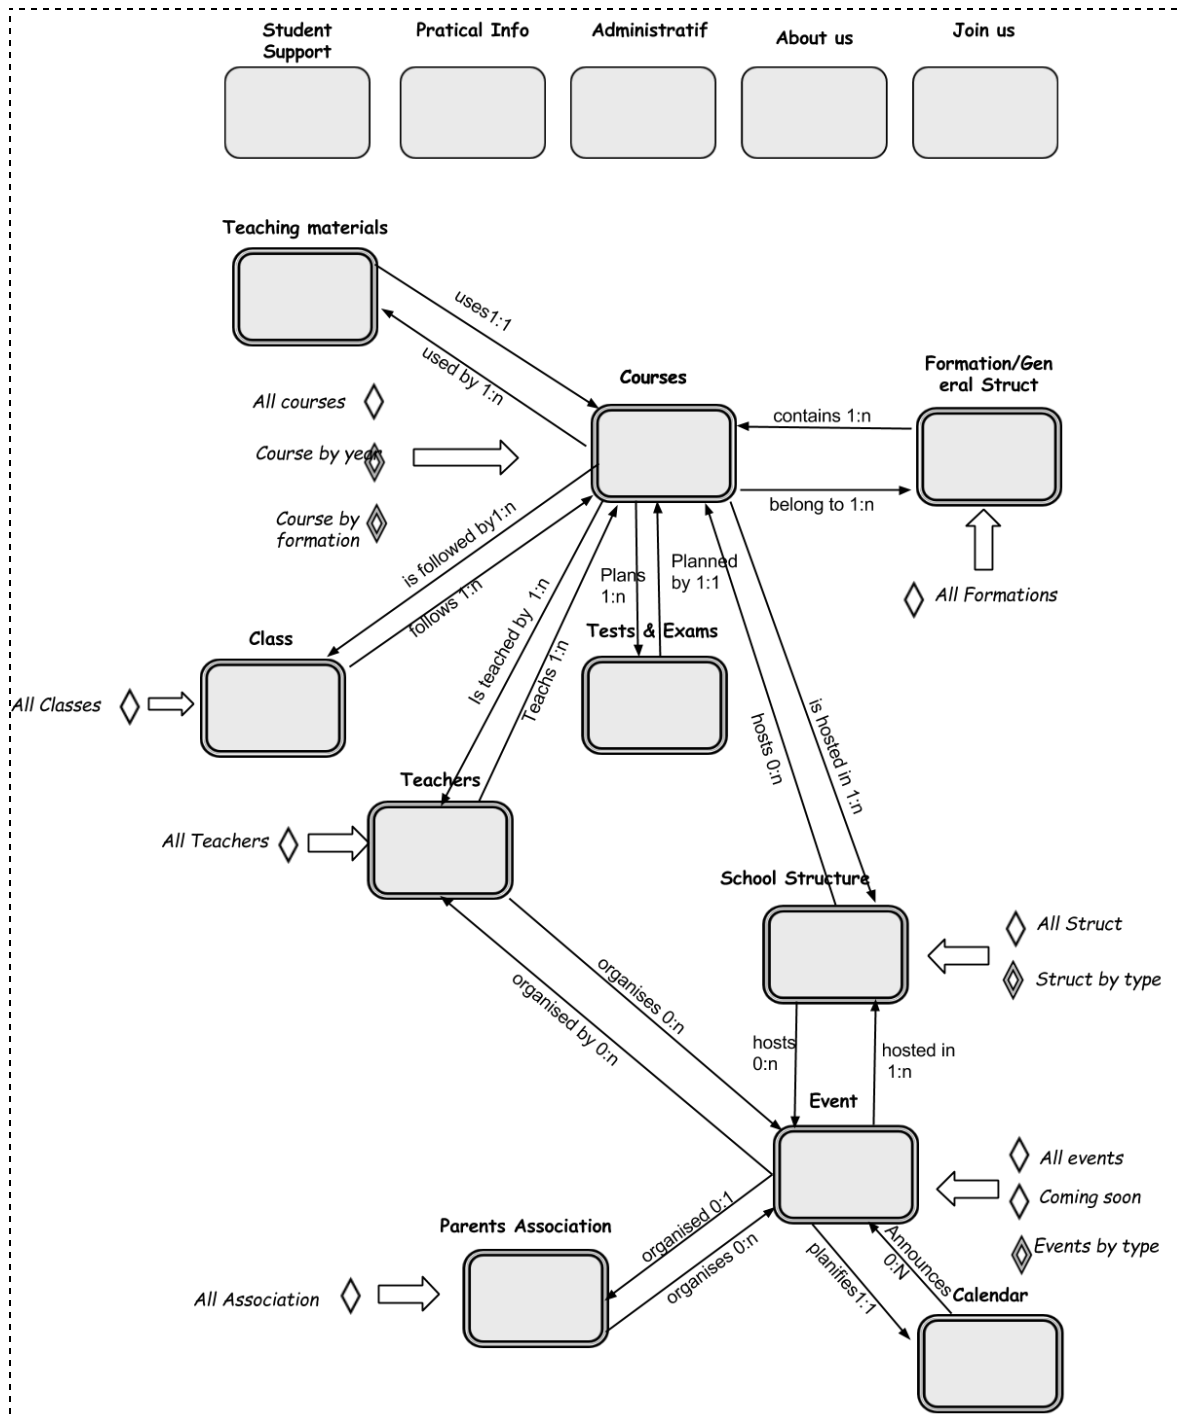

The first part of our work is to design and modelize the content with the different methods we learnt in class. The second part will be to prototype what we have imagined and defined and to produce a more technical documentation.

This document resume the first part. Our first step is the understanding of requirements by searching existing solutions and reflecting on requirements to refine or improve them. By using the Interactive Dialogue Models in the following parts, we make all content explicit in topics, kind of topics (C-IDM). Then we show relevant relationships and dialogue acts corresponding to the topics (L-IDM). We finally define the design more graphically with some sketches and scenarios to understand the process of finding informations on the website.

III. Interactive Dialogue Model.

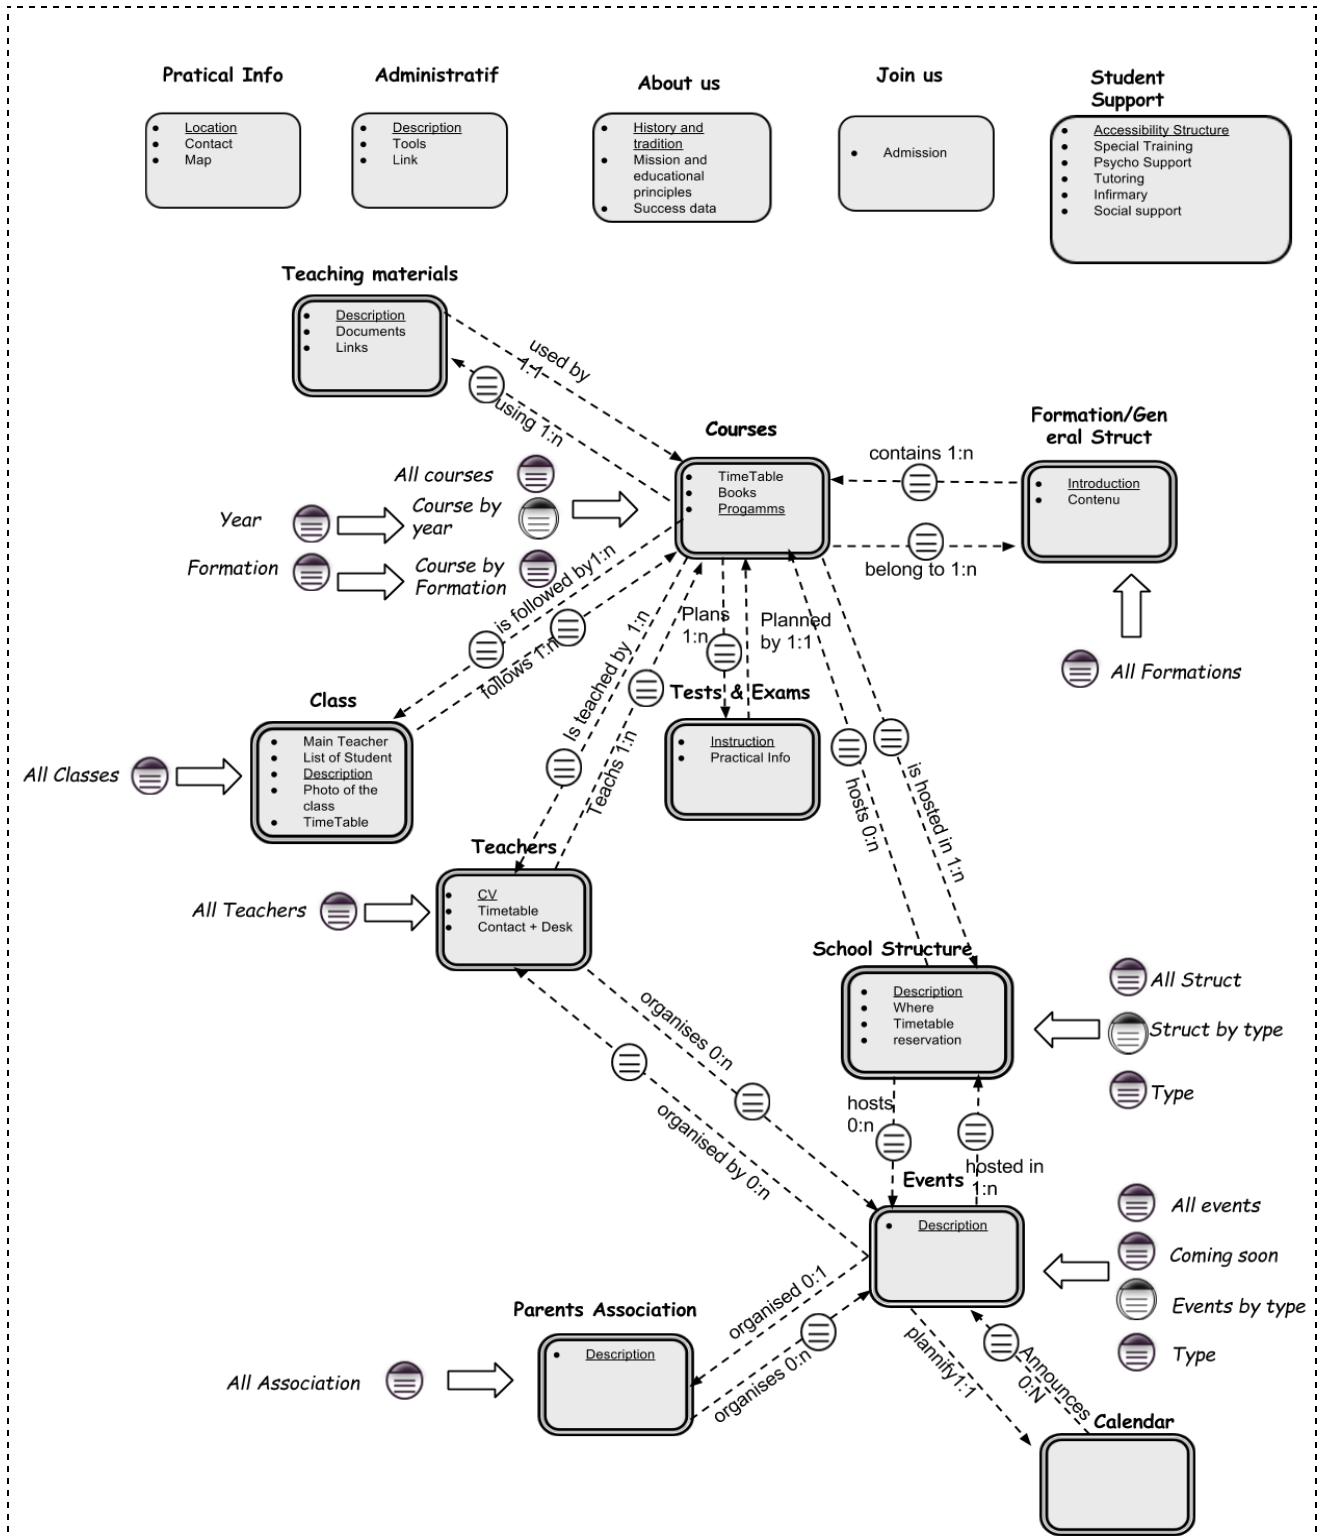

a) C-IDM

First, we want to design a simple model to represent the global architecture of the web site. In this scheme we will show which are the different relevant changes of subject and how we will organize the dialog inside our site.

b) L-IDM

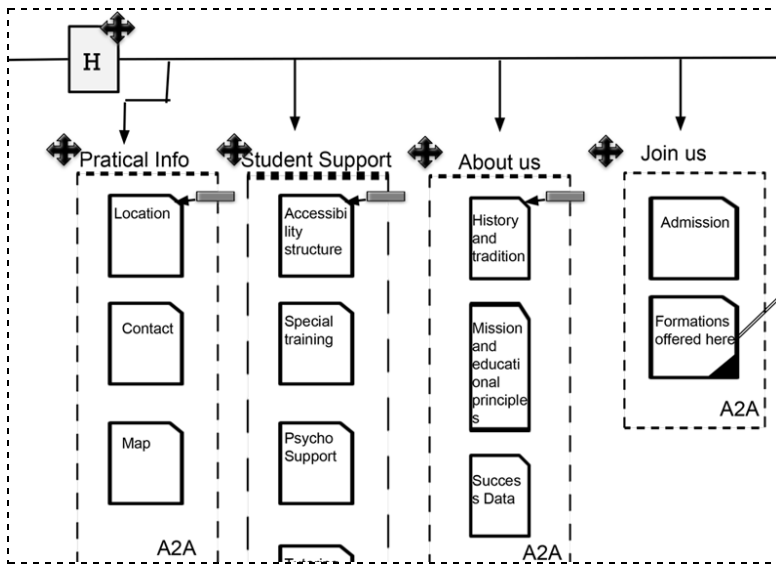

Then we have to define the contents of each (group of) topic and the way the contents are linked together :

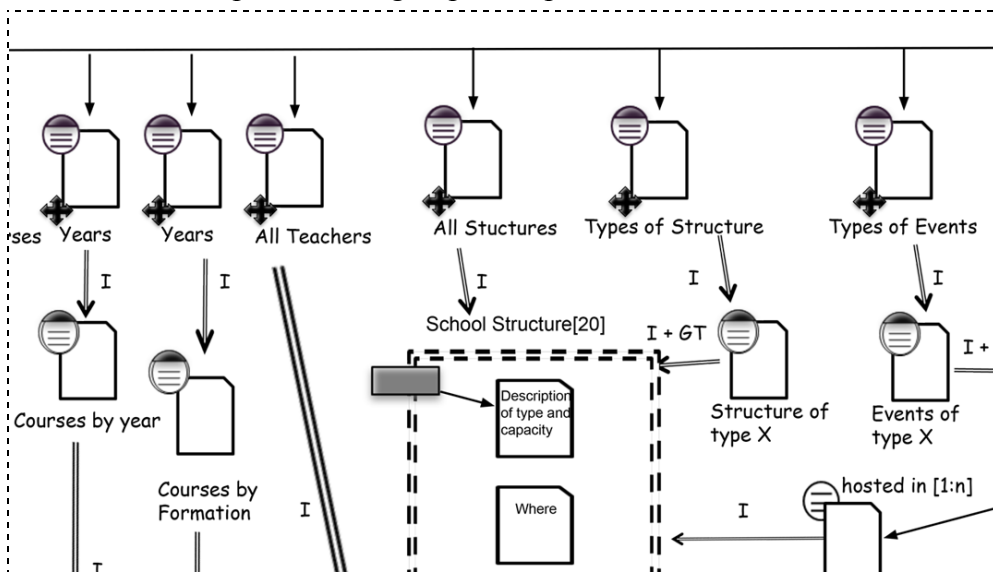

c) P-IDM

Now that we have defined the way the contents are linked together, we have to define the global map of the whole site to understand the navigation structure. The IDM Page Design will give us this view in which we will also be able to know which patterns and strategies we use to simplify the user's navigation through the content.

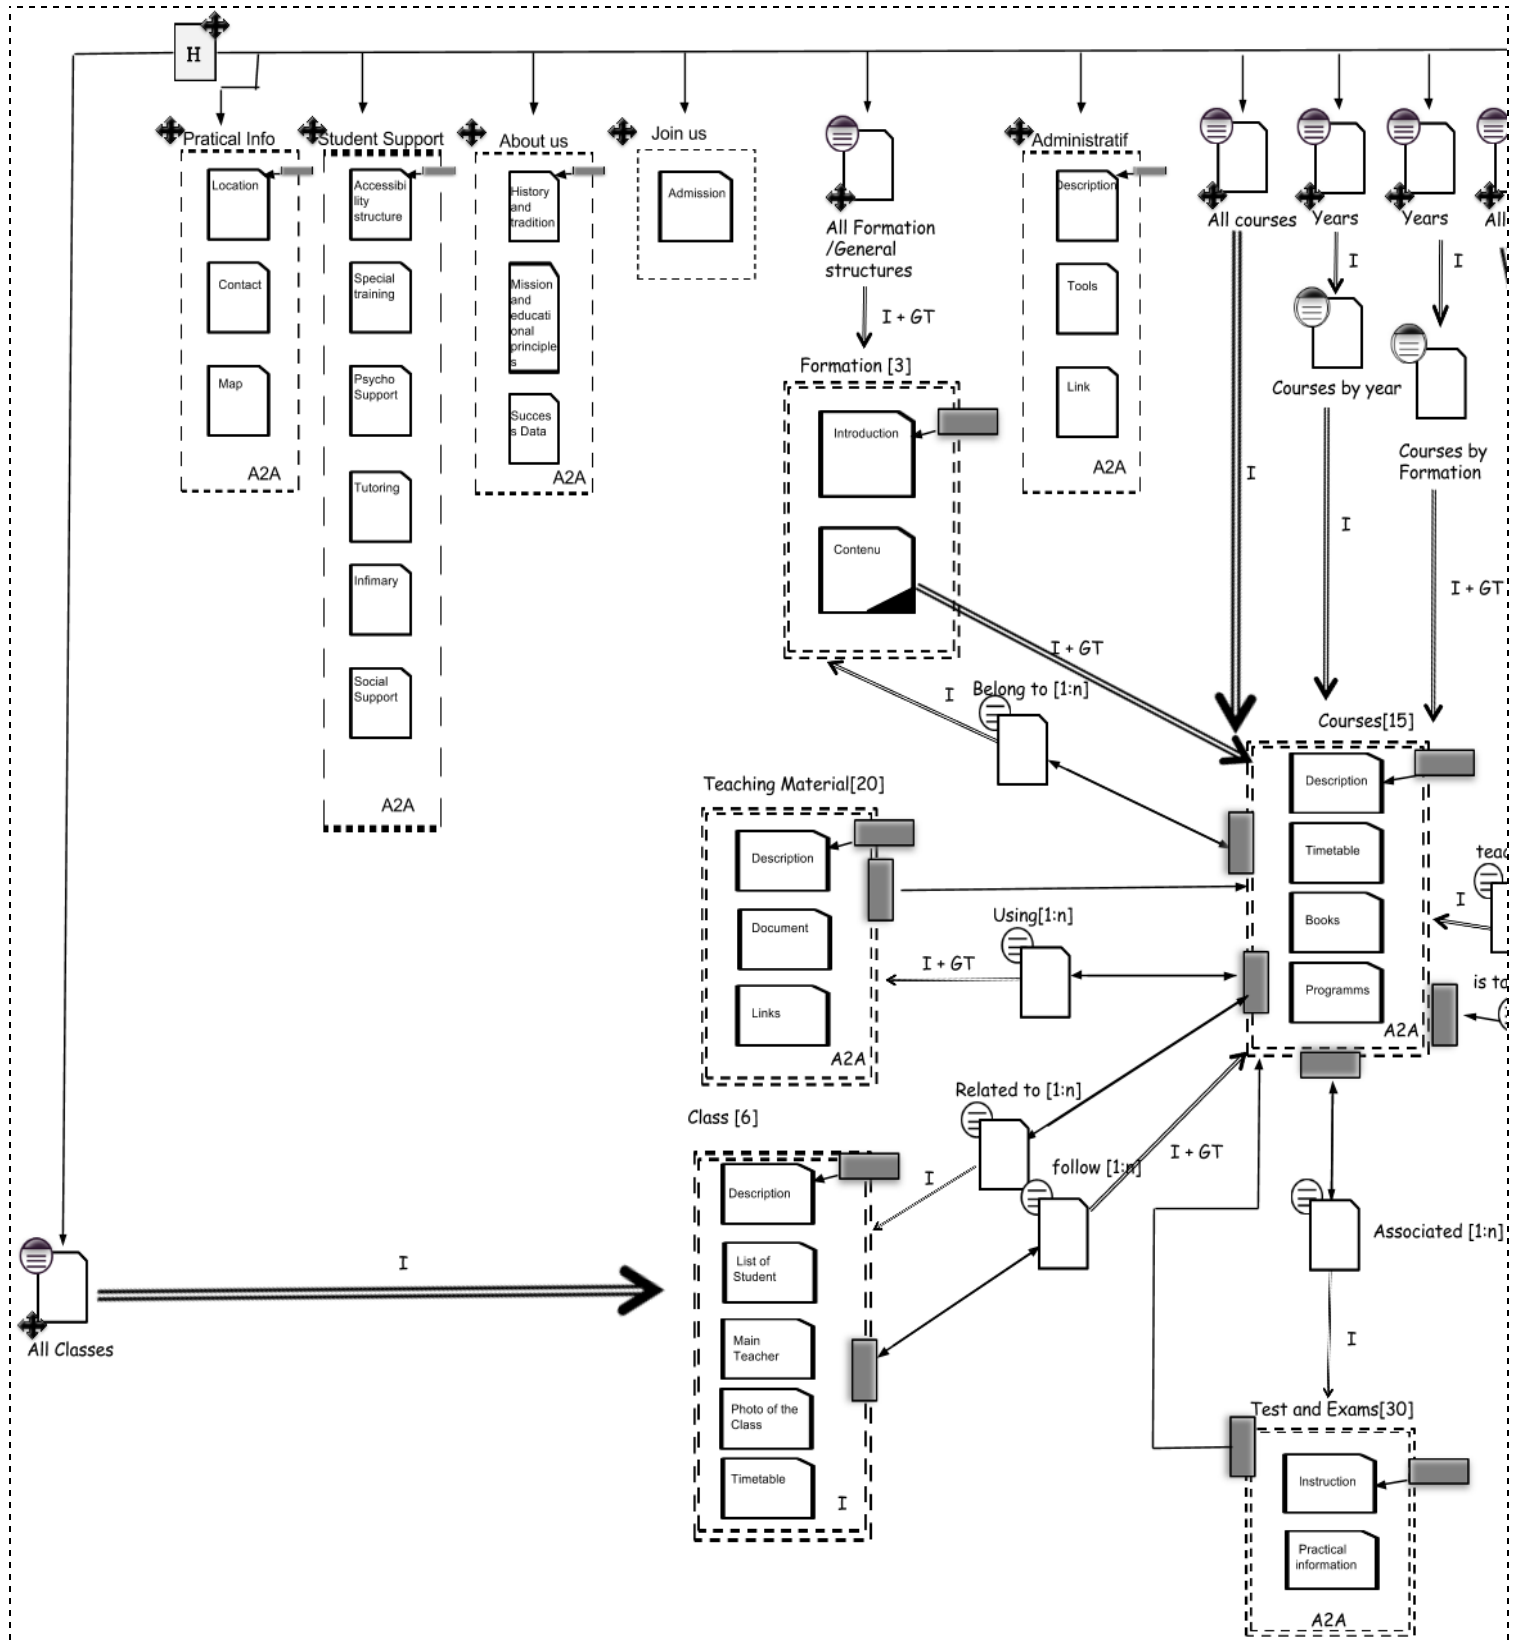

The complete diagram is available in the file "P-IDM Full.png" in the archive and also divided in 2 parts in this document. Here's the example of some single topics :

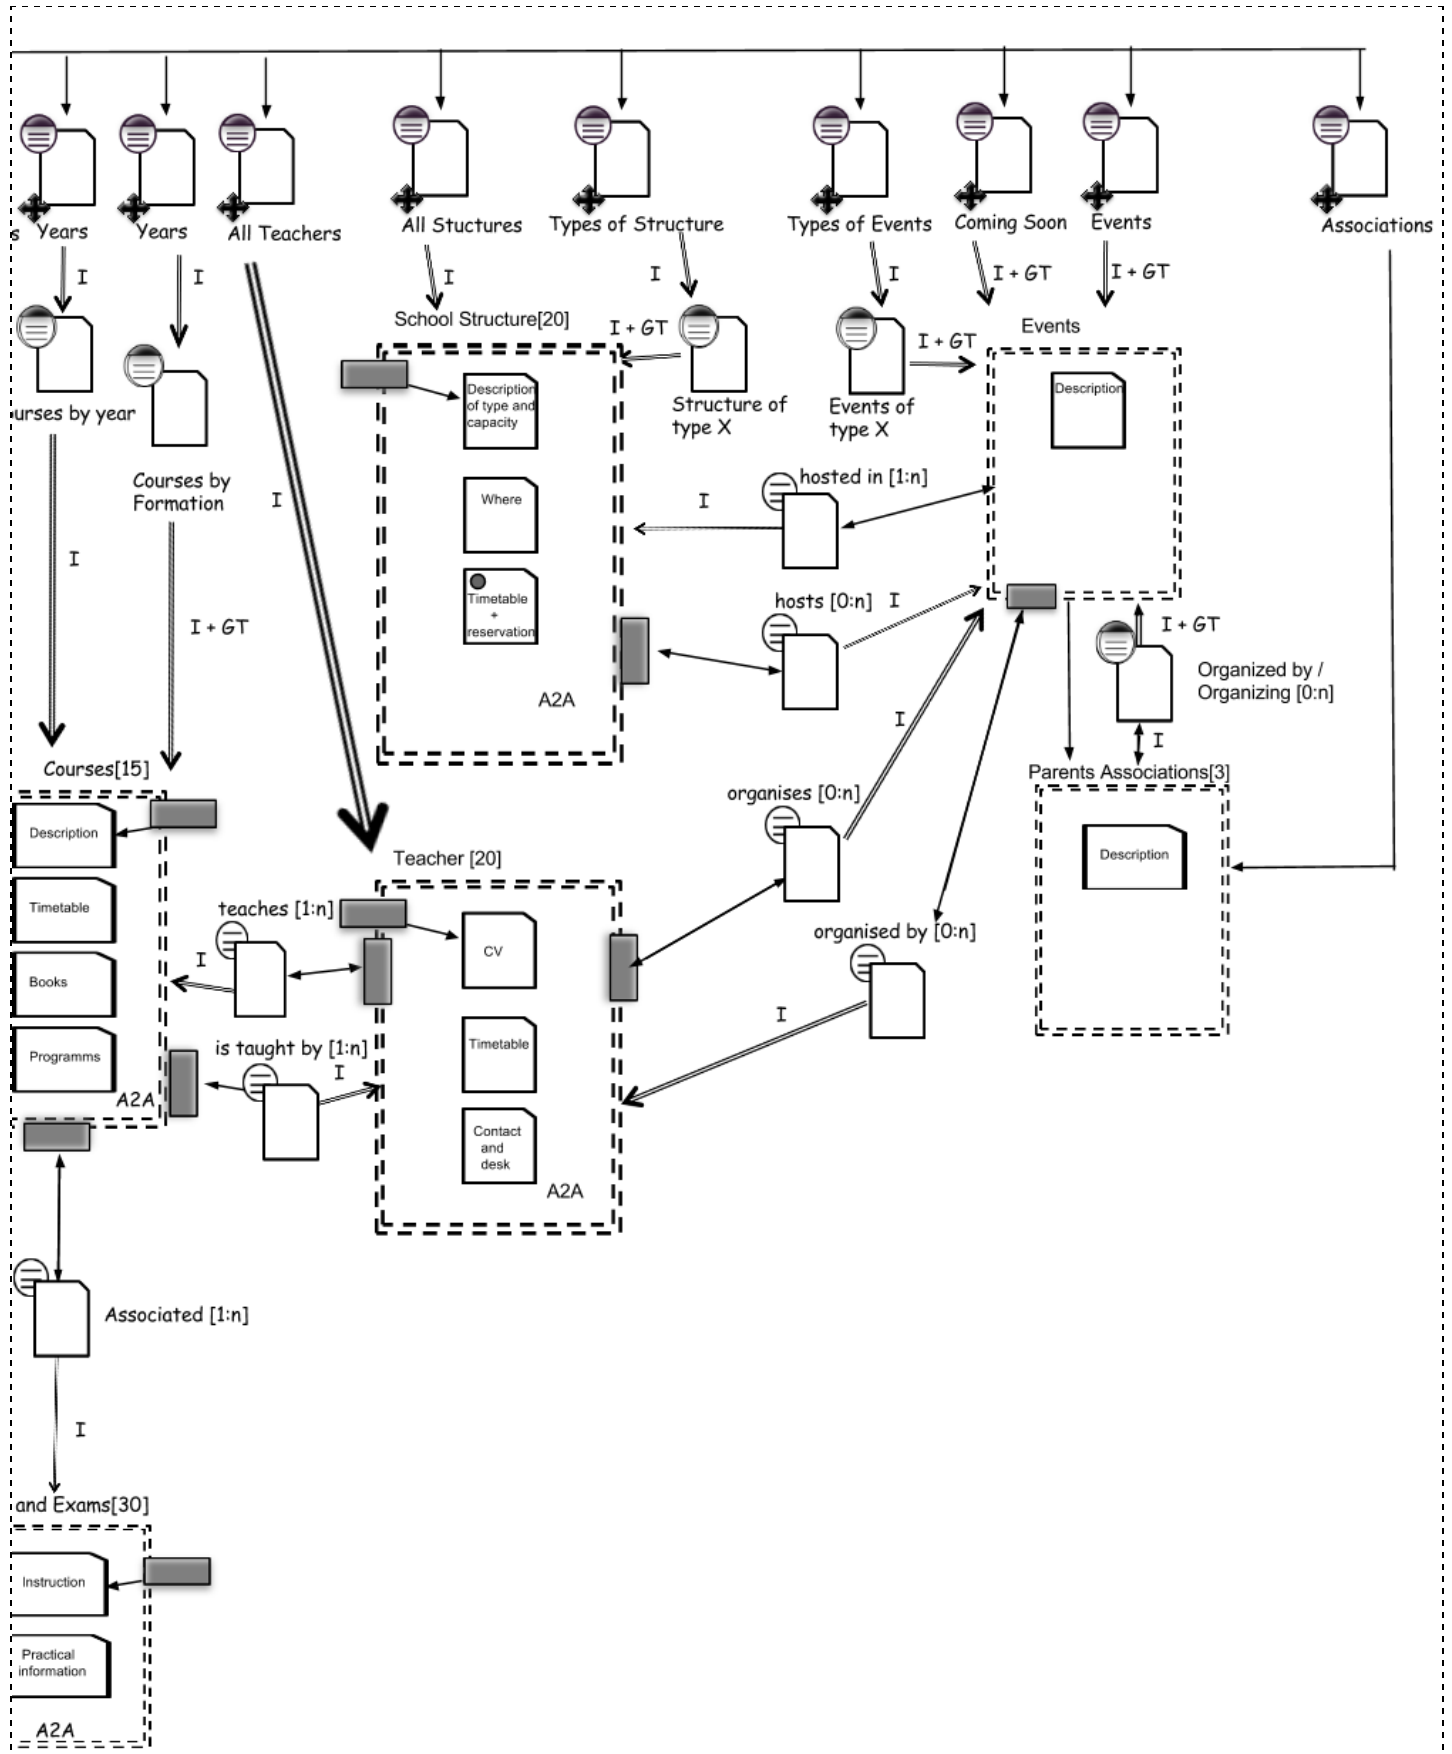

And also an example of some groups of topics :

Here is the full P-IDM divided in two parts (part left and part right) :

IV. Sketches and scenarios.

a) Sketches.

You can find all the following sketches at the end of the document, after the scenarios part and the conclusion.

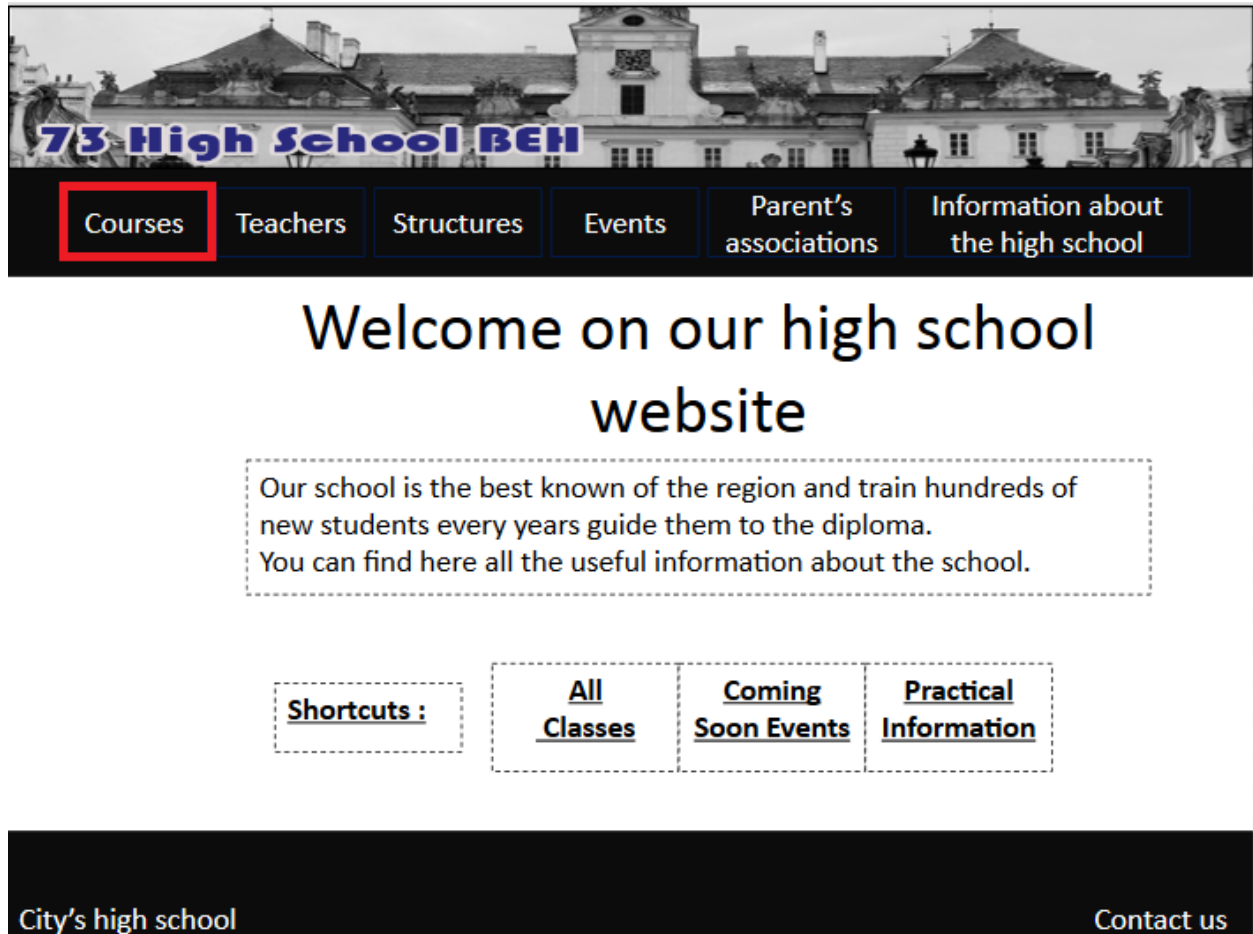

Here is the list of the sketches classified by type :

- Default page :
 - Home
 - All Courses
 - Courses by Year
 - Formations
 - Courses by formations
 - All Teacher
- Topic Page :
 - About us
- Multiple Topic page :
 - Courses
 - Teaching Material
 - Test & exams
 - Teacher
- Transition page :
 - Teaching material used by a course
 - Test & exam associated to a course
 - Teacher teaches some courses
 - 1 course is taught by some teacher.

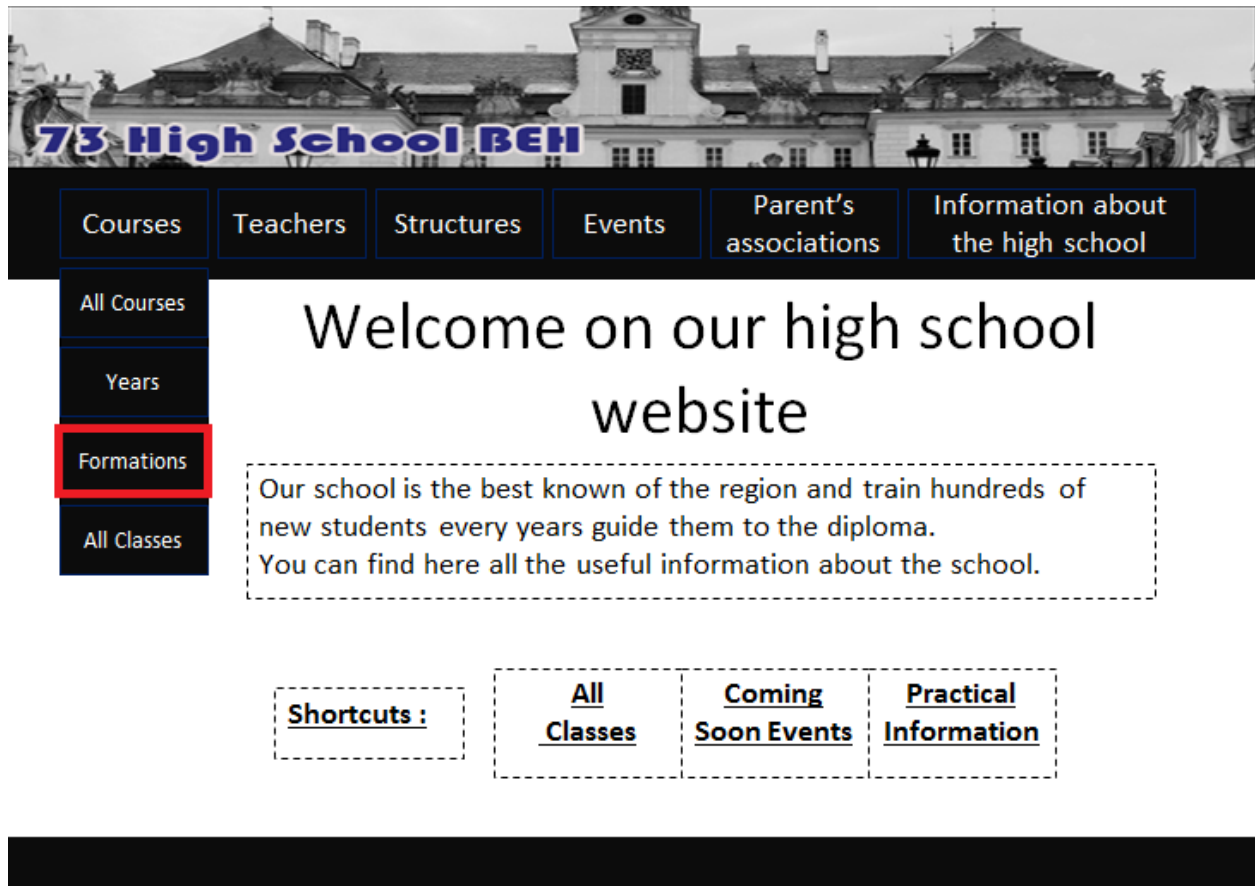

b) Scenarios.

1. A user wants to know the courses of his formation (Passage par home -> Years -> formation -> Courses by formation)

First, we assume the user is on the Home page.

Then he will have to select the Menu Courses and then a list appear. The user will then select the page : Formation.

Then he will arrive on the Following page :

Formations

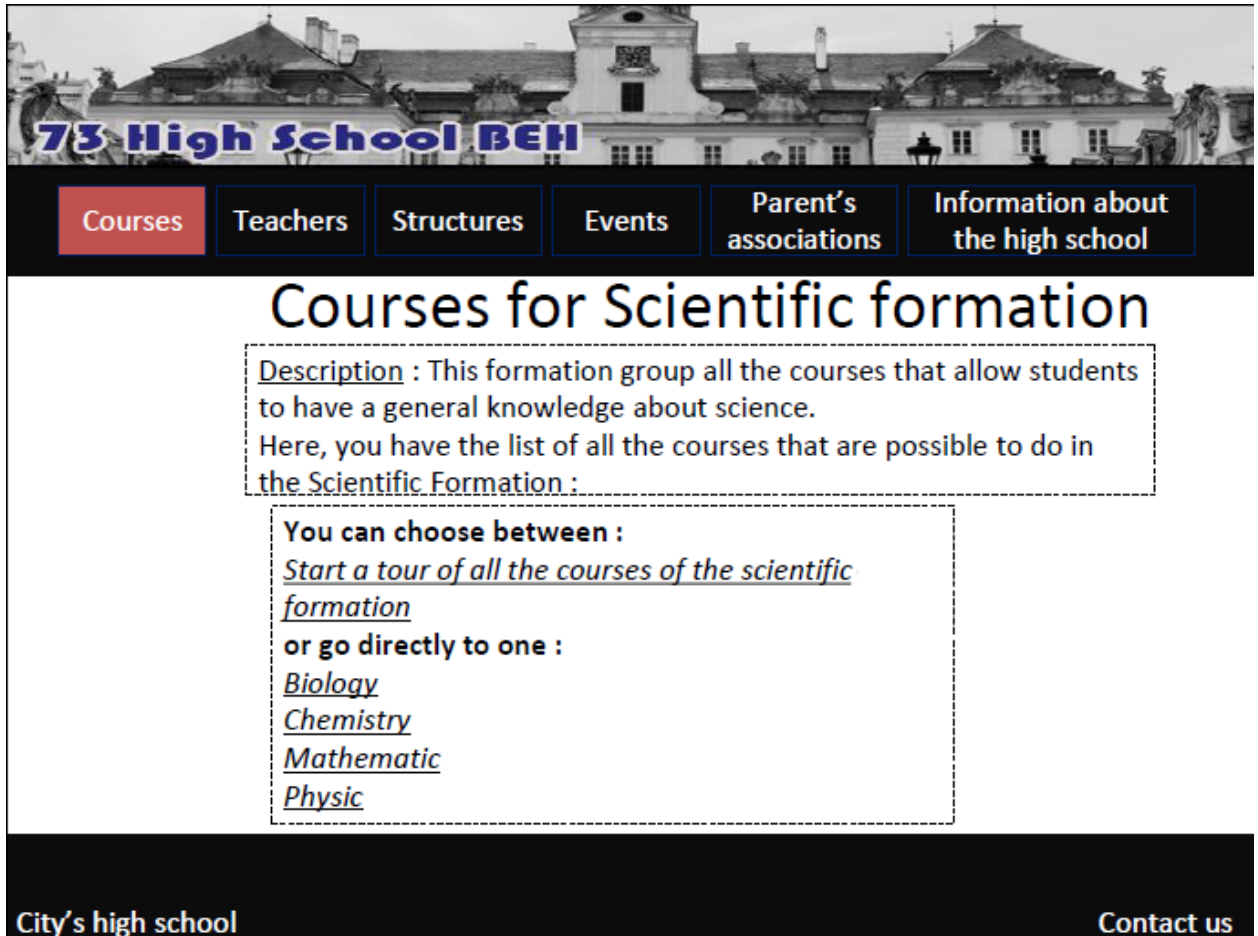

You can get all the courses which belong to the following formation and also have some general informations about the select formation:

[Scientific](#)
[Economic](#)
[Literature](#)

City's high school

Contact us

Inside the red square we can see a list of link, they will lead the user to the courses which belong to one formation. For example, if the user go on the scientific page, he will get the following page which indicate to him all the courses for the scientific formation :

The screenshot shows the website for 73 High School BEH. At the top is a banner with the school's name and a photo of the building. Below the banner is a navigation bar with links: Courses (highlighted in red), Teachers, Structures, Events, Parent's associations, and Information about the high school. The main content area is titled 'Courses for Scientific formation'. It contains a description of the formation group, a list of courses (Biology, Chemistry, Mathematic, Physic), and a link to start a tour of all courses. The footer includes 'City's high school' and 'Contact us'.

73 High School BEH

[Courses](#) [Teachers](#) [Structures](#) [Events](#) [Parent's associations](#) [Information about the high school](#)

Courses for Scientific formation

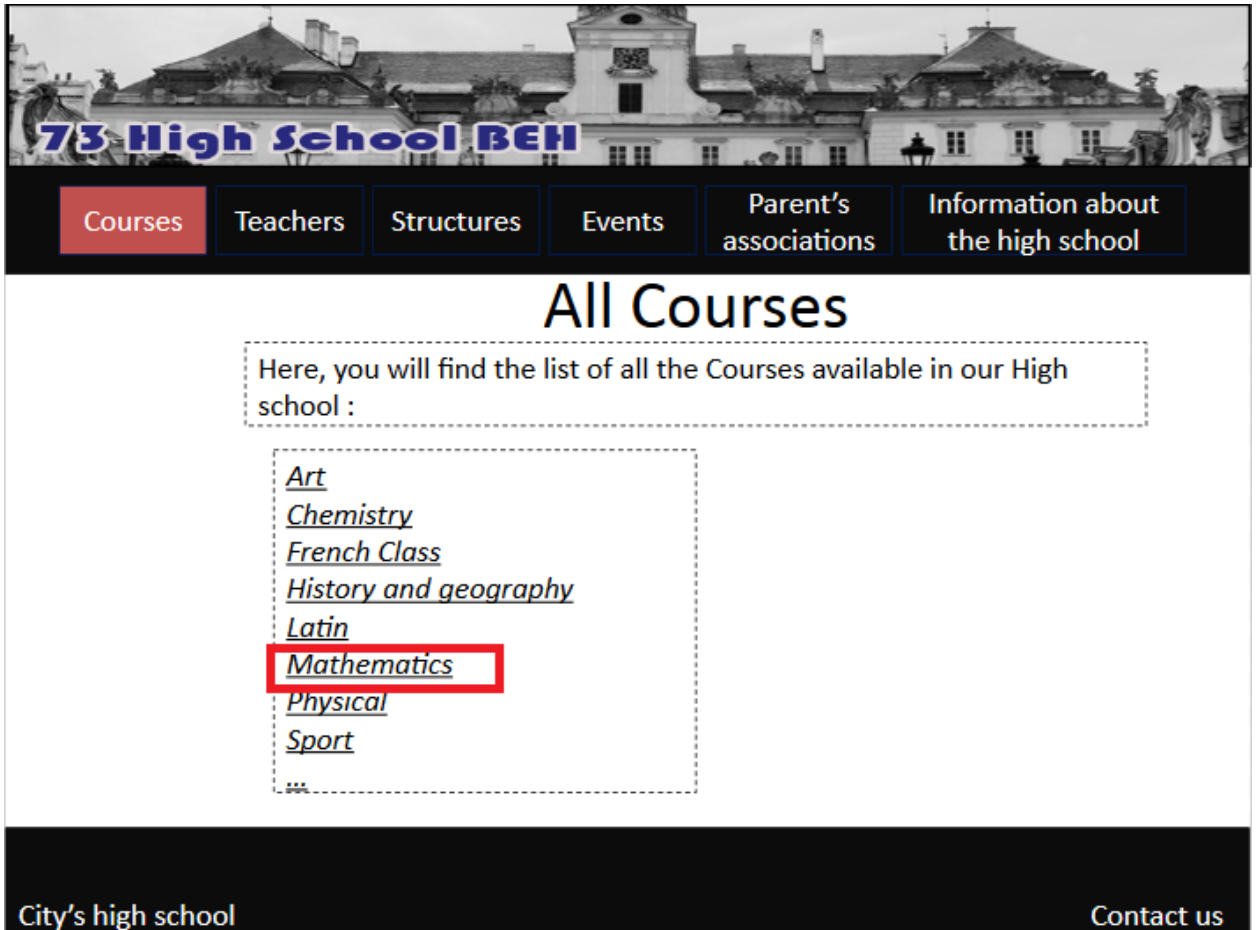

Description : This formation group all the courses that allow students to have a general knowledge about science.
Here, you have the list of all the courses that are possible to do in the Scientific Formation :

You can choose between :
[Start a tour of all the courses of the scientific formation](#)
or go directly to one :
[Biology](#)
[Chemistry](#)
[Mathematic](#)
[Physic](#)

City's high school [Contact us](#)

2. A user wants to know who is teaching mathematics (Passage par : Home -> All Courses -> Math -> Teacher.)

First, we assume that the user is on the Home page. He will choose the landmark Courses, and then select in the list the page All Courses. Then he will arrive on the following page :

On the red square, we can see the link directed to the course Mathematics. So the user can click on it and access the following page :

Courses
Teachers
Structures
Events
Parent's associations
Information about the high school

Mathematics :

- Description
- Timetable
- Books
- Programs

Pages related :

- Teacher teaching Math
- teaching material used in math
- Formation containing Math
- Classes related to Math
- Test and exam

Mathematics (first year)

Description :

Math in the study of topics such as quantity, structure, space and change. Here you will learn more about the fundamental and the basic stuff such as integral or polynomial. And so on ...

Text

Edit this page (Only for teachers)

Return to the page All courses

City's high school

Contact us

On the red square, we can see the link to the page where the teacher doing Math will be listed. The user can access to the information he wanted. And he will know who are the teachers of Mathematics.

3. A teacher wants to add information on his course

First we assume that the teacher will go on the page of his course :

73 High School BEH

[Courses](#) [Teachers](#) [Structures](#) [Events](#) [Parent's associations](#) [Information about the high school](#)

All Courses

Here, you will find the list of all the Courses available in our High school :

- [Art](#)
- [Chemistry](#)
- [French Class](#)
- [History and geography](#)
- [Latin](#)
- [Mathematics](#)
- [Physical](#)
- [Sport](#)
- ...

City's high school [Contact us](#)

Then click on the edition link :

73 High School BEH

[Courses](#) [Teachers](#) [Structures](#) [Events](#) [Parent's associations](#) [Information about the high school](#)

Mathematics :

- [Description](#)
- [Timetable](#)
- [Books](#)
- [Programs](#)

Pages related :

- [Teacher teaching Math](#)
- [Teaching material used in math](#)
- [Formation containing Math](#)
- [Classes related to Math](#)
- [Test and exam](#)

Mathematics (first year)

Programs:

During the year you will see :

- Function
 - The study of a function
 - Equation
- Geometry
 - Trigonometry
 - Vectors
- Statistics and probability
 - ...

Edit this page (Only for teachers)

Return to the page [All courses](#).

City's high school **Contact us**

Then he will have the possibility to edit the content. To verify that only teachers can edit this page, he must enter a password to validate the edition :

Courses

5. A user wants to know more about the school (about us: one precise information, per example : Success data for the science diploma)

First, we assume that the user is on the Homepage (the thread will be the same from wherever in the website). He will choose the landmark "Informations about us", and then select in the list the page "About us". Then he will arrive on the following page :

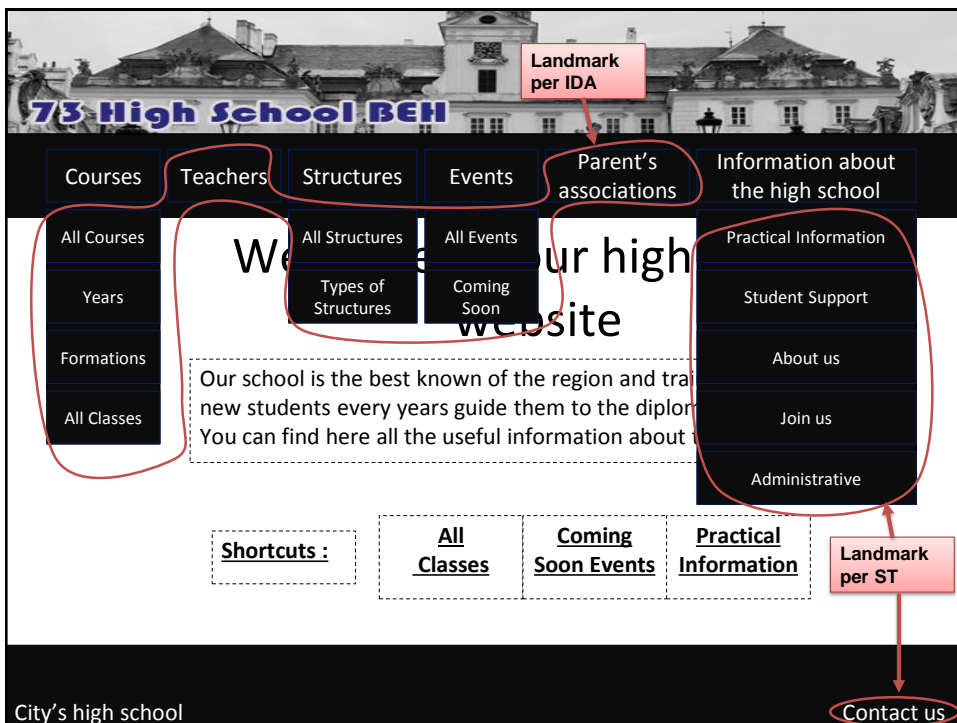

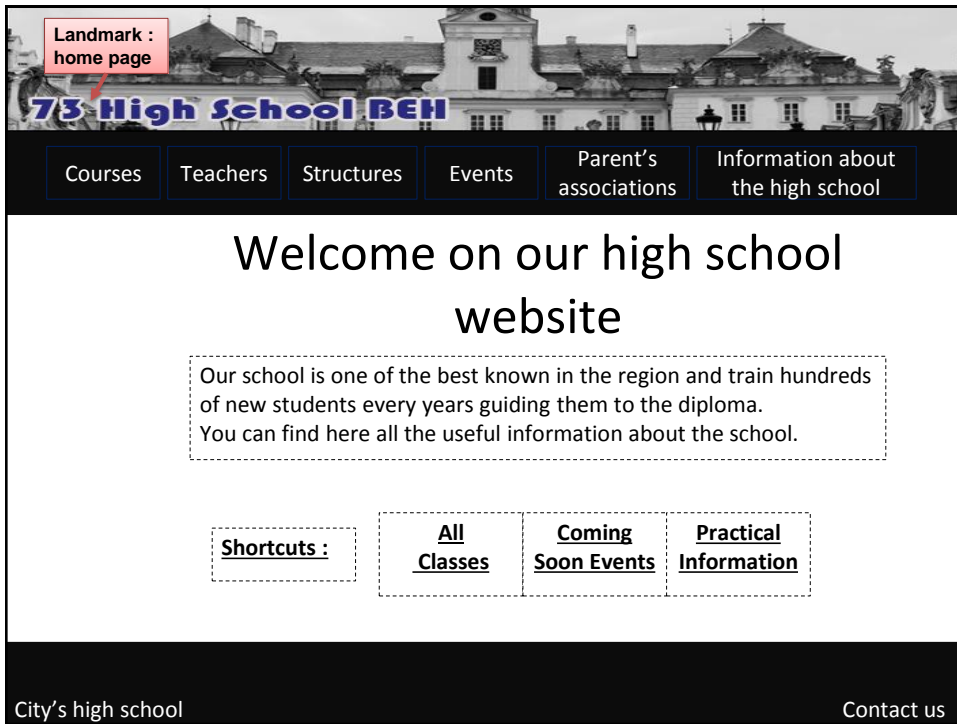

On the red square, we can see the link to the page where the success data is presented. The user can access to the information he wanted.

V. Conclusion.

As we have now define the entire design specifications of the high school website, we will be able to go threw the second part of the project and do an evolutive prototype. Thanks to the methods taught in class, we have been able to easily work together. We are confident for the following steps. It's become now almost only a technical issue and we appreciate this way to separate the work between the design part and the implementation part.

Here below in an extra part we can see all of our sketches :

EDUCATION & CERTIFICATIONS

Bachelor of Arts, Major English - Cal State University of Sacramento, Sacramento, CA (2003)
 Secondary Education Certification
 Computer Skills : MS Word, Excel, PowerPoint, Internet (research & navigation)

TEACHING EXPERIENCE

9/2003 – 12/2003

ABC HIGH SCHOOL, Sacramento, CA
 Student Teacher

Manage classroom coverage of 10th grade AP classes, assume all responsibilities of regular classroom teacher, including professional development, communications with parents, assessments of students, and staff meetings. Collaborate with cooperating teacher to design curriculum and lesson plans; perform basic administrative duties such as recording attendance and organizing student portfolios; provide individual assistance to students, as needed.

- Launched a Writing Club to increase writing proficiency amongst students and encourage expression of ideas; held meetings to develop effective writing and editing techniques and inspire creativity, allowing students to perform their written pieces for the enjoyment of others.
- Collaborated with students to publish a writing magazine that included artwork from students within the AIT department, resulting in a delightful collection of outstanding student work.
- Incorporate constructivism philosophy of teaching into classroom by implementing various student-centered learning methodologies, significantly enhanced the class environment by acting as facilitator to promote student leadership in initiating and creating positive learning opportunities.
- Integrate technology into curriculum, supplementing class lectures and developing students' word processing and researching skills. Utilize Internet for resources on current events, history, and literature to complement learning activities.
- Establish and maintain positive relationships with students, parents, and colleagues, fostering an environment of open communication and support.

About us

About us

- [The mission and educational principles](#)
- [The success data](#)

Here you can find the history and traditions, the principles and the success data that are makes our high-school:

History and traditions :

Traditions are the customs, rituals, stories and ways of thinking that those in earlier generations hand down to us and we in turn hand down to future generations. Traditions are very important because they help us understand life, who we are, where we fit in our community and world, and how the story of our life fits in the larger stories of our community and world.

In our high-school , from it's beginning (in 1812), our traditions and values are based on intellectual, moral, physical and cultural development. Enriched by students from diverse backgrounds.
